DETAILED ACTION

1. Applicant's election with traverse of Group I, claims 1-2 in Paper No. 5, filed 15 July 2002 is acknowledged. The traversal is on the ground(s) that there is Unity of Invention as now claimed. This is not found persuasive because the applied art below shows elliptical shapes.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Murakami et al. (U.S. 5,268,213).

See Figures 2 and 4, which show elliptical cross sections of the members between two apertures.

Art Unit: 1772

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curro et al. (U.S. 6,452,063 B1).

Figure 16 and column 23, lines 10-25 teach a conical type cross section that may have curved lines, which would result in an elliptical type shape. The instant invention claims an elliptical shape. It would have been obvious to one of ordinary skill in the art to have selected a curved cross section from the options given for the conical section in the reference.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time.
